Dear Professor:

Your name was given to us as a past user of our book: **Digital Control of Dynamic Systems, 3<sup>rd</sup> edition, 1998, by Franklin, Powell, and Workman.** This letter is to let you know that the most recent printing of the book will be with a hard cover, and that it will be available through your bookstore for \$85, or via a direct web order by the student for \$70. For the direct order, please instruct your students to go to:

<http://www.atlasbooks.com/marktplc/03009.htm>

and enter **FPWS70** for the discount code. While supplies last, the previous printing of the soft cover version will be selling for \$55. The best way for the students to order that version is through the web at:

<http://www.atlasbooks.com/marktplc/03009.htm> where they can get free standard shipping with the discount code: **free-ship** or from

<http://www.powells.com/biblio/9780979122606>

The Atlas Books web site will not indicate the discounted price, but the final confirmation email that comes within 24 hours of the order will indicate the discounted price and their credit cards will be charged the discounted price.

The Ellis-Kagle Press web site: [www.elliskagle.com](http://www.elliskagle.com) has information for downloading the associated Matlab files and the most current information for individuals or bookstores to purchase the book. If you wish to make the book available through your bookstore, instruct them to order it by sending a Purchase Order to [orders@bookmasters.com](mailto:orders@bookmasters.com) or fax to 419-281-6883 or calling 800-266-5564

A complementary copy of the hard cover book or Solutions Manual is available upon request to me from an instructor using the book.

Thanks!

J. David Powell
