

ECE160 Project 1

Due: In lab section, April 12 or April 14

You must use a multimedia editing system to produce a video with sound.
You will start with three (or more) video clips of your choice.
You will combine them and add a title and audio, speech and/or music.

The choice of video editing software package is up to you, but a relatively simple video editor should suffice.

You will write a report describing what you did, and you will demonstrate the original clips and the final combination in the Lab section.
You must make your video clips available on a CD along with your report.
