

1. Linear prediction Model:

$$\sum_{i=0}^n a_i s[n-i] = e[n]$$

where

$s[n]$: Input speech samples

$e[n]$: Prediction error

$$a_0 = 1$$

a) Linear Prediction coefficients

$$\begin{aligned} & 1.0000 \quad -0.8618 \\ & 1.0000 \quad -1.3877 \quad 0.6103 \\ & 1.0000 \quad -1.3584 \quad 0.5437 \quad 0.0480 \\ & 1.0000 \quad -1.3336 \quad 0.8254 \quad -0.6557 \quad 0.5180 \\ & 1.0000 \quad -1.2099 \quad 0.6688 \quad -0.4587 \quad 0.1997 \quad 0.2387 \\ & 1.0000 \quad -1.1223 \quad 0.7421 \quad -0.6270 \quad 0.4451 \quad -0.2052 \quad 0.3669 \\ & 1.0000 \quad -1.3125 \quad 0.8485 \quad -0.8578 \quad 0.7701 \quad -0.5899 \quad 0.9487 \quad -0.5184 \\ & 1.0000 \quad -1.4520 \quad 1.1037 \quad -1.0165 \quad 0.9773 \quad -0.8207 \quad 1.1770 \quad -0.8715 \quad 0.2690 \\ & 1.0000 \quad -1.4482 \quad 1.0916 \quad -1.0001 \quad 0.9659 \quad -0.8071 \quad 1.1629 \quad -0.8561 \quad 0.2489 \\ & \quad \quad \quad 0.0139 \\ & 1.0000 \quad -1.4485 \quad 1.0873 \quad -0.9852 \quad 0.9457 \quad -0.7931 \quad 1.1461 \quad -0.8388 \quad 0.2299 \\ & \quad \quad \quad 0.0390 \quad -0.0174 \end{aligned}$$

b) MSE

$$\begin{bmatrix} 1.0000 & 0.2573 & 0.1615 & 0.1611 & 0.1179 & 0.1112 & 0.0962 & 0.0704 & 0.0653 \\ 0.0653 & 0.0652 \end{bmatrix}$$

c) Reflection Coefficients

$$\begin{aligned} & 0.8618 \quad -0.6103 \quad -0.0480 \quad -0.5180 \quad -0.2387 \quad -0.3669 \quad 0.5184 \quad -0.2690 \quad -0.0139 \\ & 0.0174 \end{aligned}$$
