ECE 132 – Introduction to Solid-State Electronic Devices

UNIVERSITY OF CALIFORNIA, SANTA BARBARA
DEPARTMENT OF ELECTRICAL AND COMPUTER ENGINEERING

ECE 132 is an introductory course in semiconductor device physics for electrical engineers. The course builds on material covered in introductory physics courses, with an emphasis on applications relevant to future work in electrical engineering. We will cover the following topics:

- Introduction to semiconductor physics
- Intrinsic semiconductors, carriers
- Doping (impurities) in semiconductors
- p-n junctions, applications of p-n junctions (LEDs, solar cells, etc.)
- Bipolar transistors
- Field Effect Transistors (time permitting)

Discussion sections will be used for honing problem-solving skills and reviewing lecture material, but may also be used for make-up lectures and exam reviews. Quizzes will be given during discussion section and will be considered in the final grade.
